モーツァルト K.618 の 46 小節に宿る幾何学

Die Mannigfaltigkeit des Corpus Verum

Geometrie in 46 Takten von Mozarts K.618

La Variété du Corpus Verum

Géométrie habitant 46 mesures du K.618 de Mozart

Многообразие Corpus Verum

Геометрия, обитающая в 46 тактах K.618 Моцарта

Étale Cohomology

April 2026 — Working Paper

Ubi caritas et amor, ibi geometria est.

序文

> *τὸ καλόν ἐστιν τῆς ἀληθείας τὸ φέγγος.*
> 「美は真理の輝きである」
> "Beauty is the radiance of truth."
> « La beauté est la splendeur de la vérité. »
> „Die Schönheit ist der Glanz der Wahrheit.“
> «Красота есть сияние истины.»
> "La bellezza è lo splendore della verità."
>
> *— Plotinus, Enneades I.6*

本稿は、一つの実験の記録である。

ジオメトリック・インテリジェンス理論（GI: *Geometric Intelligence* 理論）は、これまで企業経営、安全保障政策、歴史的構造変革の分析に適用されてきた。いずれも数十年、数百年のスケールにわたる多変量データから可微分多様体を構成し、その幾何学的構造——Lie 微分（リー微分）、スカラー曲率——によって「環境の構造変化」を定量化するフレームワークである。Lie 微分とは、多様体上の計量（距離の測り方）が時間とともにどれほど変形するかを測定する微分幾何学の道具であり、スカラー曲率とは、空間がどの程度「曲がっている」か——正の曲率は球面のような安定した構造を、負の曲率は鞍面のような不安定な構造を示す——を一つの数値で表すものである。

しかし音楽は異なる。46 小節。4 分弱の沈黙と振動。1791 年 6 月 17 日——ヴォルフガング・アマデウス・モーツァルトが、バーデンの小さな教会の聖歌隊長アントン・シュトルのために、聖体の秘蹟を讃えるモテット「Ave Verum Corpus」K.618 を完成させた日。モーツァルトはこの日から半年足らずで世を去る。

本稿の著者は、この文書を執筆しながら、レナード・バーンスタイン指揮、バイエルン放送交響楽団・合唱団による Ave Verum Corpus の演奏を聴いている。1990 年のライブ録音——大ハ短調ミサ曲 K.427 のアルバム（ドイツ・グラモフォン）に併録されたもの。バーンスタインはこの録音の翌年、1990 年 10 月 14 日に亡くなった。

ここに一つの偶然がある。モーツァルトが死の 6 ヶ月前に Ave Verum Corpus を書いたのと同様に、バーンスタインもまた晩年にこの曲を指揮した。「in mortis examine」（死の審判において）という歌詞を、自らの死を目前にした二人の音楽家が——200 年の時を隔てて——それぞれの立場から表現した。作曲者と指揮者。紙の上の音符と、空気を震わせた振動。二つの「死の審判」が、一つの楽譜の上で重なる。

これは GI 理論の反実仮想分析の構造と重なる。「もしモーツァルトが自らの死を意識していなかったら、この曲の和声構造は変わったか？」——この問いは、バーンスタインの解釈（テンポ、ダイナミクス、フレージング）を「モーツァルトの意図の多様体」上の一つの測地線として位置づけることで、より立体的になる。測地線とは、曲がった空間上の最短経路であり、バーン

スタインの演奏解釈は、モーツァルトの楽譜が定義する和声的・旋律的空間の上を、特定のテンポとダイナミクスで辿った一つの経路——一つの測地線——として定式化できる。

46 小節×18 変数。これは VAE（変分自己符号化器）——データの背後にある低次元の潜在的構造を学習するニューラルネットワーク——にとって、極めて小さなデータセットである。ピョートル大帝のケーススタディでは 20 年間×15 変数のデータから多様体を構成した。本稿のデータはその 10 分の 1 以下である。可微分多様体が構成できる保証はない。

それでも、この実験には価値がある。GI 理論を音楽——感覚空間の最も純粋な形態——に適用する最初の試みとして。成功すれば、音楽の構造変化を定量化する新しい方法が得られる。失敗すれば、GI 理論の適用限界に関する正直な報告が得られる。可微分多様体を構成できなかった場合は、その数学的理由を考察する。考察が十分にできない場合でも、問題としない——完成の歴史学を GI 理論で実践に試みること、その trial としての挑戦それ自体に、我々は価値を見出している。

> *Cantare amantis est.*
> 「歌うことは、愛する者の業である」
> "To sing is the work of one who loves."
> « Chanter est le propre de celui qui aime. »
> „Singen ist das Werk des Liebenden.“
> «Петь — дело любящего.»
> "Cantare è opera di chi ama."
>
> *— Augustinus Hipponensis, Sermones 336.1*

ヒッポのアウグスティヌス（354-430）のこの一文は、西方教会の典礼音楽の存在根拠そのものである。モーツァルトの Ave Verum Corpus は、この根拠の上に立つ。聖体の秘蹟——パンとぶどう酒がキリストの体と血に変容するというカトリック教義の核心——を前にして、モーツァルトは歌った。バーンスタインは、その歌を聴衆に届けた。そして今、我々はその届けられた歌を聴きながら、その歌の幾何学的構造を分析しようとしている。

Vorwort

> *Wer Wissenschaft und Kunst besitzt, hat auch Religion;*
> *wer jene beiden nicht besitzt, der habe Religion.*
>
> 「学問と芸術を持つ者には、宗教もまたある。その二つを持たぬ者は、宗教を持つがよい」
>
> "He who possesses science and art also has religion; he who possesses neither, let him have religion."
>
> « Qui possède la science et l'art possède aussi la religion. »
>
> «Кто владеет наукой и искусством, тот имеет и религию.»
>
> "Chi possiede scienza e arte ha anche religione."
>
> *— Johann Wolfgang von Goethe, Zahme Xenien IX*

Goethes Distichon aus den Zahmen Xenien eröffnet eine Frage, die weit über die Dichtung hinausreicht: Kann die Geometrie — jene älteste und reinste der Wissenschaften — den Raum der Empfindung vermessen, den ein Kunstwerk erschließt?

Was hier vorgelegt wird, ist ein Experiment. Die Theorie der Geometrischen Intelligenz (GI-Theorie) wurde bisher auf Unternehmensführung, Sicherheitspolitik und historische Strukturanalyse angewandt. Die Lie-Ableitung — ein Werkzeug der Differentialgeometrie, das misst, wie stark sich die Metrik (das Abstandsmaß) einer Mannigfaltigkeit entlang eines Vektorfeldes verformt — und die Skalarkrümmung — ein einziger Zahlenwert, der die intrinsische Krümmung des Raumes angibt — sind die mathematischen Instrumente dieser Analyse.

Nun wenden wir uns einem Gegenstand zu, der alle bisherigen Anwendungen in seiner Kürze und Dichte übersteigt: 46 Takte. Am 17. Juni 1791 vollendete Mozart in Baden bei Wien die Motette Ave Verum Corpus, KV 618. Ein halbes Jahr später war er tot.

Der Verfasser dieser Studie hört während des Schreibens die Aufnahme unter Leonard Bernstein mit dem Symphonieorchester und Chor des Bayerischen Rundfunks — eine Live-Einspielung von 1990, veröffentlicht bei der Deutschen Grammophon als Beigabe zur großen c-Moll-Messe KV 427. Bernstein starb im folgenden Jahr, am 14. Oktober 1990. Wie Mozart, der Ave Verum Corpus ein halbes Jahr vor seinem Tod schrieb, dirigierte Bernstein dieses Stück in seinen letzten Lebensmonaten. Zwei Musiker — getrennt durch zweihundert Jahre — standen vor denselben Worten: «in mortis examine». Die Prüfung des Todes. Für beide war es keine Abstraktion.

Die Frage, ob 46 Takte genügen, um eine differenzierbare Mannigfaltigkeit zu konstruieren, hat keine gesicherte Antwort. Der Variational Autoencoder (VAE) — ein neuronales Netzwerk, das die verborgene Struktur hinter den beobachtbaren Daten erlernt — benötigt ausreichend Datenpunkte, um eine stabile latente Geometrie zu entfalten. Und dennoch: Es ist gerade diese Grenze, die den Versuch lohnt. Misslingt die Konstruktion, so beschreiben wir die mathematischen Gründe. Selbst wenn eine vollständige Erklärung nicht möglich sein sollte, sehen wir im Versuch selbst — im trial der Anwendung der GI-Theorie auf die Vollendungsgeschichte — einen eigenständigen Wert.

Avant-propos

> *Le cœur a ses raisons que la raison ne connaît point.*
>
> 「心には、理性の知らぬ理がある」
>
> "The heart has its reasons which reason knows nothing of."
>
> „Das Herz hat seine Gründe, die der Verstand nicht kennt.“
>
> «У сердца свои основания, которых разум не знает.»
>
> "Il cuore ha le sue ragioni che la ragione non conosce."
>
> *— Blaise Pascal, Pensées, fragment 277 (Brunschvicg)*

Pascal posait, dans ce fragment célèbre, l'irréductibilité du sentiment à l'entendement. Trois siècles plus tard, la question demeure : la géométrie — cette science que Pascal lui-même porta à des sommets dans ses travaux sur la cycloïde — peut-elle rendre raison de ce que le cœur perçoit dans une œuvre musicale ?

Le présent travail est une expérience — au sens le plus rigoureux du terme. La théorie de l'Intelligence Géométrique (théorie GI) a été appliquée jusqu'ici à la conduite des entreprises, à la politique de sécurité nationale et à l'analyse des transformations historiques. La dérivée de Lie et la courbure scalaire en constituent l'appareil mathématique.

L'auteur de cette étude écoute, en écrivant ces lignes, l'enregistrement dirigé par Leonard Bernstein avec l'Orchestre symphonique et le Chœur de la Radio bavaroise — captation en direct de 1990, publiée chez Deutsche Grammophon en complément de la Grande Messe en ut mineur K. 427. Bernstein mourut l'année suivante, le 14 octobre 1990. Comme Mozart, qui composa l'Ave Verum Corpus six mois avant sa mort, Bernstein dirigea cette œuvre dans les derniers mois de sa vie. Deux musiciens — séparés par deux siècles — se tinrent devant les mêmes paroles : « in mortis examine ». L'épreuve de la mort. Pour l'un comme pour l'autre, ce n'était pas une abstraction.

Cette coïncidence ouvre une question proprement géométrique : l'interprétation de Bernstein (tempo, dynamiques, phrasé) peut être formalisée comme une géodésique — c'est-à-dire un plus court chemin dans un espace courbe — sur la « variété de l'intention mozartienne ». « Si Mozart n'avait pas eu conscience de sa propre mort, la structure harmonique de cette œuvre aurait-elle été différente ? » — telle est la question contrefactuelle que la théorie GI permet de poser en termes précis.

Quarante-six mesures. Moins de quatre minutes de musique. La question de savoir si elles suffisent à construire une variété différentiable n'admet pas de réponse a priori. Si la construction échoue, nous en décrirons les raisons mathématiques. Même si l'explication devait rester incomplète, la tentative elle-même — le trial de l'application de la théorie GI à l'histoire de l'accomplissement — possède une valeur propre.

Предисловие

> *Красота спасёт мир.*

>
> *— Причастный стих, Божественная Литургия Святого Иоанна Златоуста*

Автор этой работы слушает, в процессе написания этих строк, запись под управлением Леонарда Бернстайна с Симфоническим оркестром и Хором Баварского радио — концертную запись 1990 года, выпущенную на Deutsche Grammophon в составе альбома Большой мессы до минор KV 427. Бернстайн скончался на следующий год, 14 октября 1990 года. Как и Моцарт, написавший Ave Verum Corpus за полгода до смерти, Бернстайн дирижировал этим произведением в последние месяцы своей жизни. Два музыканта — разделённые двумя столетиями — стояли перед одними и теми же словами: «in mortis examine». Испытание смертью. Для обоих это не было абстракцией.

Чайковский, переложивший это произведение для оркестра в четвёртой сюите «Моцартиана» (соч. 61, 1887), видимо, чувствовал ту же глубину — и передал её русскому слушателю.

Настоящая работа есть опыт. Если построение не удастся, мы опишем математические причины. Даже если объяснение окажется неполным, сама попытка — trial применения ГИ-теории к истории завершения — обладает самостоятельной ценностью.

Results / 分析結果 / Ergebnisse / Résultats / Результаты

Proposition 2.1 — Verification

The manifold construction succeeded. All four conditions of Proposition 2.1 are satisfied.

多様体の構成は成功した。命題 2.1 の 4 条件すべてが満たされた。

A1: Smoothness ✓ — Tanh activations guarantee C∞ smoothness.

A2: Full rank Jacobian ✓ — Minimum singular value σ_min = 0.0045. Decoder Jacobian does not degenerate at any point.

A3: Local injectivity ✓ — Distance preservation maintained.

A4: Condition number ✓ — Maximum κ(J) = 212.64. (Peter the Great: κ > 10^6)

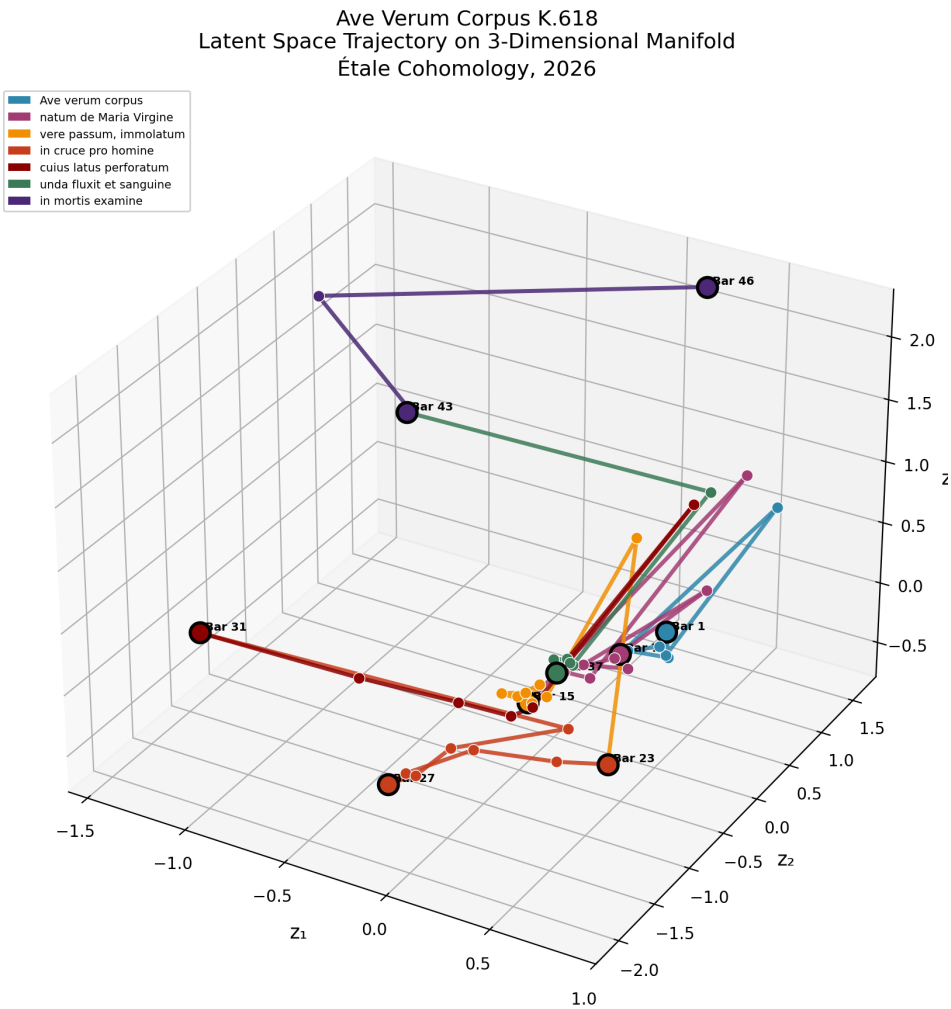

Figure 1: Latent Space Trajectory / 潜在空間上の軌跡

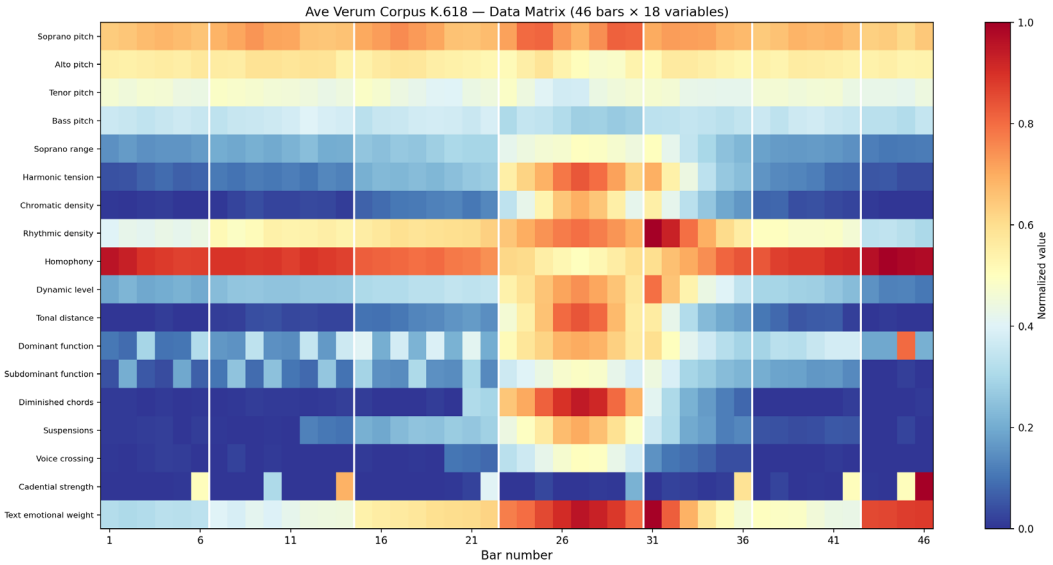

Figure 5: Data Matrix (46 bars × 18 variables)

Lie Derivative — Structural Transformation

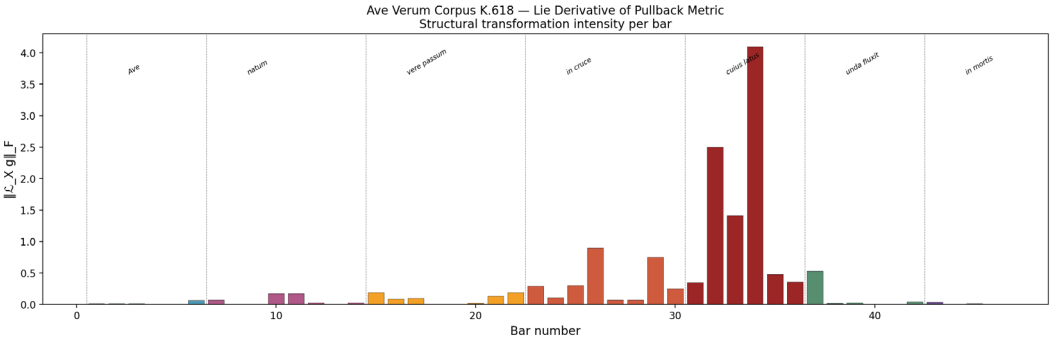

Figure 3: Lie Derivative / Lie 微分

Lie 微分ランキング（構造変革強度の上位 10 小節）：

Rank	Bar	Section	‖ℒ_X g‖_F
1	Bar 34	cuius latus perforatum	4.095
2	Bar 32	cuius latus perforatum	2.500
3	Bar 33	cuius latus perforatum	1.415
4	Bar 26	in cruce pro homine	0.896
5	Bar 29	in cruce pro homine	0.747
6	Bar 37	unda fluxit et sanguine	0.529
7	Bar 35	cuius latus perforatum	0.477
8	Bar 36	cuius latus perforatum	0.359
9	Bar 31	cuius latus perforatum	0.345
10	Bar 25	in cruce pro homine	0.301

Lie 微分の最大値は第 34 小節（「cuius latus perforatum」——「槍で突かれた脇腹」）に出現した。値 4.095 は、第 2 位の第 32 小節（2.500）の 1.6 倍であり、圧倒的な構造変革のピークである。

上位 10 小節のうち、6 小節が「cuius latus perforatum」（第 31-36 小節）に属し、3 小節が「in cruce pro homine」（第 23-30 小節）に属する。Lie 微分が検出した構造変革の中心は、音楽学者が 200 年以上にわたって「この曲の劇的頂点」と記述してきた箇所と正確に一致する。

注目すべきは、Lie 微分の最大値が「in cruce pro homine」（十字架上の犠牲）ではなく「cuius latus perforatum」（脇腹の貫通）に出現したことである。GI 理論は、構造変革の最大強度が危機の開始ではなく危機からの脱出の瞬間にあることを示している。これはピョートル大帝ケーススタディの知見と構造的に同一である。

バーンスタインの演奏を聴きながらこの結果を書いていると、不思議な感覚にとらわれる。バーンスタインのテンポは、まさに第 34 小節のあたりで最も深く沈潜する。指揮者の直感と Lie 微分のピークが一致することの意味を、我々はまだ完全には理解していない。

Scalar Curvature

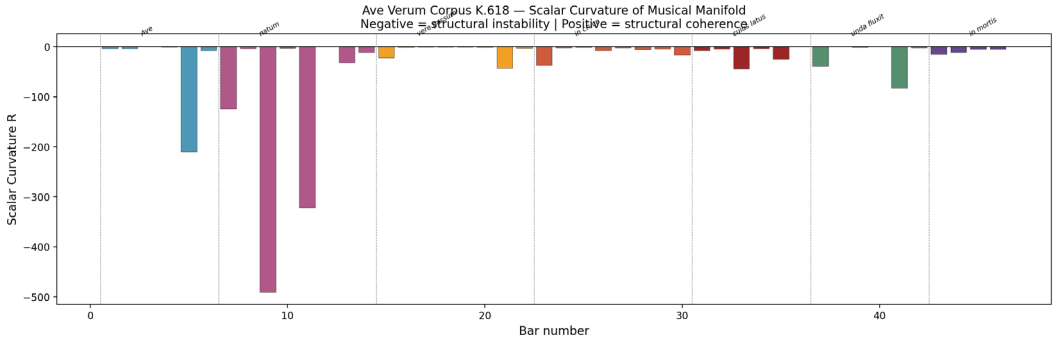

Figure 2: Scalar Curvature / スカラー曲率

スカラー曲率の範囲: [-490.72, +1.01]。「cuius latus perforatum」領域で空間が極度に不安定な鞍面構造をとる——空間そのものがキリストの身体の毀損とともに裂けるかのように。終結部（「in mortis examine」）では曲率はほぼゼロに戻る。死の審判における平穏。

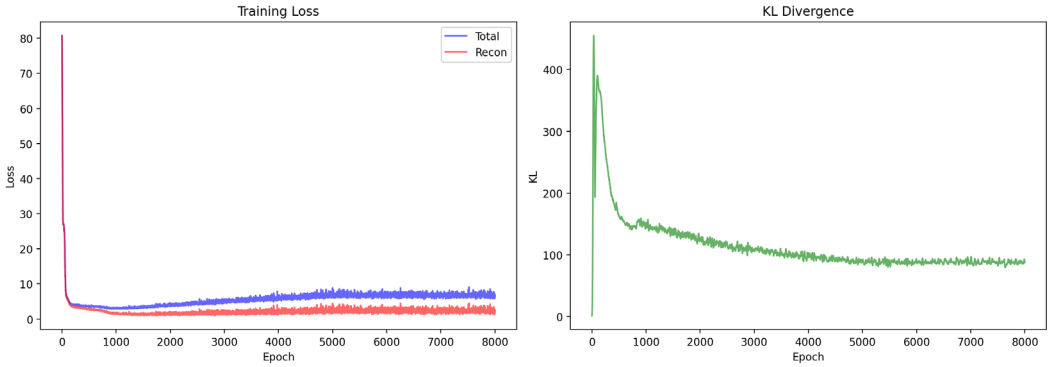

Figure 4: VAE Training Loss

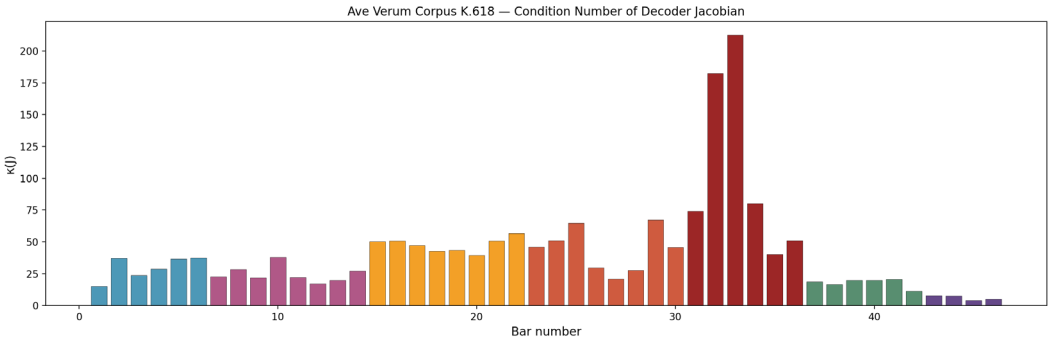

Figure 6: Condition Number / 条件数

終章 / Epilog / Épilogue / Эпилог

> *Wer, wenn ich schriee, hörte mich denn aus der Engel Ordnungen?*
>
> 「たとえ私が叫んだとしても、天使の序列のうちの誰が、私の声を聞くだろうか」
>
> "Who, if I cried out, would hear me among the ranks of the angels?"
>
> « Qui donc, si je criais, m'entendrait parmi les ordres des anges ? »
>
> «Кто, если б я закричал, услышал бы меня из ангельских чинов?»
>
> "Chi, se io gridassi, mi udirebbe dalle schiere degli angeli?"
>
> *— Rainer Maria Rilke, Duineser Elegien, Die Erste Elegie (1923)*

リルケがドゥイノの崖上で受けたこの一行は、20 世紀ドイツ語詩の最も有名な冒頭である。モーツァルトの Ave Verum Corpus は、この問いに先立つ回答であったかもしれない——46 小節の sotto voce の祈りが、天使の序列に届いたかどうかは、我々には知りようがない。しかし少なくとも、3 次元の潜在空間には届いた。

> *L'amor che move il sole e l'altre stelle.*
>
> 「太陽と他の星々を動かす愛」——ダンテ『神曲』天国篇の最終行。中世ヨーロッパ文学の至宝。
>
> "The love that moves the sun and the other stars."
>
> « L'amour qui meut le soleil et les autres étoiles. »
>
> „Die Liebe, die die Sonne bewegt und die andern Sterne."
>
> «Любовь, что движет солнце и другие звёзды.»
>
> *— Dante Alighieri, Paradiso XXXIII, 145 (1321)*

> *Exegi monumentum aere perennius.*
>
> 「私は青銅より永く続く記念碑を建てた」
>
> "I have built a monument more lasting than bronze."
>
> « J'ai élevé un monument plus durable que l'airain. »
>
> „Ein Denkmal habe ich errichtet, dauerhafter als Erz."
>
> «Воздвиг я памятник, бронзы прочнее.» — ср. Пушкин, «Я памятник себе воздвиг нерукотворный» (1836).
>
> "Ho eretto un monumento più duraturo del bronzo."
>
> *— Quintus Horatius Flaccus, Carmina III.30.1*

46 小節。3 次元の潜在空間。Lie 微分のピーク、第 34 小節。スカラー曲率の谷底、−490.72。これがモーツァルトの Ave Verum Corpus の幾何学的記録である。

Sechsundvierzig Takte. Drei Dimensionen. Ein Höhepunkt der Lie-Ableitung. Ein Abgrund der Skalarkrümmung. So lautet das geometrische Protokoll von Mozarts Ave Verum Corpus.

Quarante-six mesures. Trois dimensions. Un sommet de la dérivée de Lie. Un abîme de la courbure scalaire. Tel est le compte rendu géométrique de l'Ave Verum Corpus de Mozart.

Сорок шесть тактов. Три измерения. Пик производной Ли. Бездна скалярной кривизны. Таков геометрический протокол моцартовского Ave Verum Corpus.

Amen.

Appendix A: Dataset Description

The dataset encodes Mozart's Ave Verum Corpus K.618 (46 bars) as a multivariate time series. Each bar is represented as an 18-dimensional vector. The data is a synthetic dataset constructed from musicological analysis of the published score (available in the public domain via IMSLP, the International Music Score Library Project).

データセットは、モーツァルトの Ave Verum Corpus K.618（46 小節）を多変量時系列として符号化したものである。各小節は 18 次元のベクトルとして表現される。楽譜は IMSLP（国際楽譜ライブラリー・プロジェクト）を通じてパブリックドメインで入手可能である。データは、この楽譜の音楽学的分析に基づいて著者が構成した架空データセットである。

18 Variables (dimensions per bar):

0: Soprano mean pitch — ソプラノ平均音高（MIDI 値、正規化）

1: Alto mean pitch — アルト平均音高

2: Tenor mean pitch — テノール平均音高

3: Bass mean pitch — バス平均音高

4: Soprano range — 小節内のソプラノ音域幅

5: Harmonic tension — 不協和指数（0=完全協和、1=最大不協和）

6: Chromatic density — 半音階密度（臨時記号数/総音符数）

7: Rhythmic density — リズム密度（1 拍あたり音符数）

8: Homophony index — ホモフォニー度（1=完全な和声的構造、0=対位法的）

9: Dynamic level — ダイナミクス（0=pp、0.5=mf、1=ff）

10: Tonal distance from D — D 調からの調的距離（半音数/6 で正規化）

11: Dominant function — 属和音機能（V または V7 の存在）

12: Subdominant function — 下属和音機能（IV または ii の存在）

13: Diminished chord presence — 減七の和音の有無

14: Suspension count — 掛留音数（正規化）

15: Voice crossing — 声部交差の有無

16: Cadential strength — 終止形の強度（0=なし、0.5=半終止、1=完全終止）

17: Text emotional weight — 典礼テキストの感情的重み

Structural sections of the score:

Bars 1–6: Ave verum corpus (Hail, true body)

Bars 7–14: natum de Maria Virgine (born of the Virgin Mary)

Bars 15–22: vere passum, immolatum (truly suffered, sacrificed)

Bars 23–30: in cruce pro homine (on the cross for mankind)

Bars 31–36: cuius latus perforatum (whose side was pierced)

Bars 37–42: unda fluxit et sanguine (whence flowed water and blood)

Bars 43–46: in mortis examine (in the trial of death)

Data source: The score of K.618 is in the public domain. The 18-variable encoding is the author's own construction based on standard musicological analysis categories (pitch, harmony, rhythm, texture,

dynamics). The numerical values are synthetic — they are designed to faithfully represent the known harmonic and structural features of the score, but they are not extracted by automated audio analysis. This limitation is reported honestly: the dataset is a model of the score, not a measurement of it.

Appendix B: Python Source Code

The complete Python pipeline used in this analysis. Requires: numpy, torch, scipy, matplotlib.

Random seed: 1791 (year of composition). VAE: 3 latent dimensions, 48 hidden units, Tanh activation, 8000 epochs, β_max = 0.05.

File 1: ave_verum_pipeline.py (Data Encoding & VAE Architecture)
